

Aker Solutions is a global provider of products, systems and services to the oil and gas industry. Its engineering, design and technology bring discoveries into production and maximize recovery. The company employs approximately 14,000 people in about 20 countries. Go to www.akersolutions.com for more information on our business, people and values.

Aker Solutions' Safety & Environment group is part of the Engineering Projects Division in based at Fornebu, Norway. The group is divided in three main areas; Technical Safety, Analysis and Working & Natural Environment and consists of approx. 23 highly skilled employees. Our department takes part in FEED development, detail design, modification and commissioning of complex onshore and offshore installations. We need experienced engineers who can strengthen our team and support our growth plans within the global offshore engineering market.

Noise Control Engineer

Responsibilities and Tasks:

Aker Solutions is globally renowned for its excellent safety in design performance. We are also proud of our good working environment and motivating team spirit and are presently looking for a Noise Control /Acoustic Engineer to contribute to one of our many interesting projects.

As one of our Noise Control engineers you will typically be involved in one or more of the following activities:

- Specification, evaluation and implementation of noise control and acoustic requirements in design in accordance with required noise and acoustics legislation (mostly NORSOK S-002)
- Specification and follow-up of noise emitting equipment packages.
- Calculation and prediction of area noise levels using relevant software (CADNA R is our primary tool).
- Specification and evaluation of sound insulation and sound absorption requirements for building elements.
- Evaluation and calculation of public address (PA) systems.
- Possibility for trouble-shooting and measurement on existing fields.
- Interface and cooperation with other project team members, subcontractors/vendors and client personnel as necessary.

Qualifications and Personal Qualities:

We are looking for motivated candidates with minimum 4 years relevant experience, preferably with a degree in acoustic engineering or a similar relevant qualification. You should have excellent technical knowledge and writing skills and can communicate fluently in English which is the working language. You should be happy at working in project environments as part of a large team and have good communication and interpersonal skills so as to be able to explain our rather complicated subject to non-specialist clients and associates. Travel on shorter assignments may be expected.

We Offer:

- Competitive compensation and benefits

- Good work/life balance
- Positive work environment with challenging tasks
- Development opportunities

Contact Us:

If you are interested in this position, please do not hesitate to submit your resume and application.
