

## We are looking for outstanding individuals to join our exciting team

Working at Dyson taught me that we can all do amazing things when encouraged, supported and left to run free. Back in what looks like the 80's, Apple were getting this right, we want to do the same.

Through a MACH approach, we are building something different; a company of 25 that looks after its employees by encouraging individualism, and fundamentally investing in knowledge and potential. We have filled 3 out of 5 positions in January, but still have two positions outstanding; one for an entrepreneurial individual to join and help grow our London office, and a second position available for those with less experience.

MACH has a lot more potential, with the aim to double in size. We are all very proud of what we have achieved, working with some of the best architects, on some amazing projects, but above all we are most proud of our work where we are developing AI Revit Tools, thermal modelling capabilities, a multi-discipline residential department, MACH Products, FDTD modelling, and lots lots more.

If you feel that you want to be part of something that is changing and moving forwards please drop me an email at [ze@machacoustics.com](mailto:ze@machacoustics.com).
