Acoustic Consultants / Senior Acoustic Consultants / Acoustic Lead

SIXENSE is a global firm delivering world-class excellence in engineering support services and digital solutions.

We are working on some of the most challenging major infrastructure projects including Crossrail, Thames Tideway Tunnel, HS2, Grand Paris Express and The Melbourne Metro Rail Project.

With an in-house team of more than 30 acoustic and environmental specialists, our acoustic consulting business is one of SIXENSE's fastest growing areas of expertise.

We have an opportunity at our London Bridge office for an accomplished professional to lead a team of consultants and technicians as Noise and Vibration Specialist on our £2.5M Thames Tideway East contract. The successful candidate will also take a lead position in the general operation and development of the UK acoustic consulting business.

We are also looking for talented acoustic and environmental professionals at all levels of experience to work on our global project portfolio, initially from our London Bridge office, but with upcoming opportunities further afield including Melbourne. Candidates who are entrepreneurial or innovators will have the opportunity to become involved in our ambitious business expansion plans.
